## Reclaimed Water Reservoir Outfall and Filtration Documentary

PORT ORANGE, FL – The City of Port Orange produced a documentary that highlights the completion of its Reclaimed Water Reservoir Outfall and Filtration project. Found on the City’s web site at [www.port-orange.org](http://www.port-orange.org), the documentary showcases an innovative project that not only creates greater capacity to store reclaimed water for future use, but also provides several environmental benefits.

Located on the City’s property off Tomoka Farms Road, the reservoir, consisting of 175 acres, was developed to provide seasonal storage for peak reclaimed water demands and, restrict discharge of effluent into the Halifax River. The lakes also enhance recharge to the Floridian aquifer and wetlands in the City’s wellfield.

Through the use of stunning aerial drone photography and interviews, the documentary educates viewers on the project’s stormwater harvesting abilities, creation of wildlife habitat, and alternative water supply benefits. In addition, the presentation discusses the project’s best management practices that allow the City to reuse water a second time to irrigate lawns and landscapes, and thus reduce the need to draw additional water from the Floridian aquifer.
